AFL craft

Playdough Food colours mixing

Following children's interest in footy sports from last week, the educators provided children an opportunity to design their own AFL jumpers. This learning experience was focused on encouraging children to imagine and get engaged in making patterns by cutting various art material in their own desired shape. Some children made stripes, and some made square dots and showed great concentration in decorating their jumpers with combination of various colours. Their artworks have been displayed on the wall in Kinder Room.

Children also got engaged in construction with big and small blocks and showed great team skills with the ability to negotiate and achieve a common goal. Considering children's interest in building with blocks, the educators have added Legos on one of the tables to encourage children to get engaged in table-top learning experiences. Children showed great interest in building with Legos and we also added visual saying "Work in Progress" to save children's unfinished work so that they can continue building after transition times during the day.

Children showed interest in painting both indoors and outdoors and got engaged in practicing their fine motor skills with paint brushes. The educators also have added scissors on playdough table to encourage children to practice gross motor skills with scissors. Children got engaged in making choc chips and sprinkles on the cupcakes by cutting playdough with scissors. The educators also provided children an opportunity to mix food colours in natural coloured playdough. Children showed great enthusiasm to make two different coloured playdough: pink and yellow. Later on, both the colours got mixed up together and a new colour was discovered. It was a sensory experience focussed on practicing gross motor skills with kneading and help each other to accomplish a common goal .
